Writing. Task 1.

I'm glad to tell you about usage of technology in education in my country.

A lot of useful devices and services are presented nowadays. Many classrooms are getting digital blackboards. They are much better than regular blackboards: it decreases amount of dust as it does not require chalk and it lets teachers to use more educational resources as it's capable of showing presentations, videos, volumetric shapes, graphs and more. So digital blackboards are useful on any lesson, especially Geometry. Also such service as online diary is widely used today. It makes it much easier to get grades of a student, time table, list of lessons, list of teachers, general information about school, etc. And it isn't the only way technology helps manage educational process. Each class has its own chat so both teachers and students may inform others about anything quickly. Another thing technology is used for is making it more comfortable to be at school. For example, only a few years ago if you wanted to buy some food, you had to pay with cash, but now you can pay with your credit card too which is much more comfortable.

If you want to see technology usage yourself you definitely should watch History and Biology lessons. I think, these are the lessons that involve technology the most.
